PROJECT APPROACH

Plan-Spec

With decades of experience in construction projects, we will review plans and specifications to determine the lowest possible cost and build per design.

Design-Assist

We work closely with the design and construction team to clarify the operational benefits and review alternate options based on price and performance.

Design-Build

These projects bring together the owner, architects, general contractors, engineers, and other trades to meet the owner's requirements for the process.

Queen Alia Military hospital- JRMS

Integrated Project Delivery

Being able to integrate all the resources for one company is a task, and we regularly participate in collaborative design and planning processes to accommodate the unique needs of each project.

Operating Room Lights

Our eco-friendly and long lasting iCE LED Surgical Lights last a minimum of 50,000 hours, translating into decades of energy cost savings. The ultra-efficient technology leaves a Green Footprint wherever it is installed

Amico iCE LED Surgical Lights have superior shadow reduction and deep cavity illumination. This is created with multiple overlapping beams and are adjustable by turning a centrally mounted handle to create a long homogeneous column of light. This allows surgeons to effortlessly direct a precise light pattern into the surgical field while providing the ideal balance of shadow reduction and deep cavity illumination

Patient Lift

The Amico Golift is an ideal ceiling lift/hoist system designed to safely lift, transfer and reposition a patient with as little effort as possible for the caregiver.

The Golift can be integrated into our Amico headwalls, pendants as well as our traditional ceiling track systems, making it an ideal and complete solution for both your ICU and OR. Golift is the world's smallest 700 lb patient lift that weighs less than 10 lbs!

Booms/Pendants

Complete your ICU or OR with our movable pendant systems equipped with state-of-the-art electric brakes that provide a user-friendly experience for your caregivers.

Integrated equipment such as Amico's Golift ceiling 11ft and equipment transport systems provide a safe and effective way to transport patients and IV pumps from the ICU to the OR.

Beds & Stretchers

Amico Beds and Stretchers incorporate distinctive features to assist caregivers by providing a more meaningful level of care and comfort for patients. A full line of thick, durable, flame resistant support

Solutions for “Best in Class”
Acute Care

5000

Responder[®]

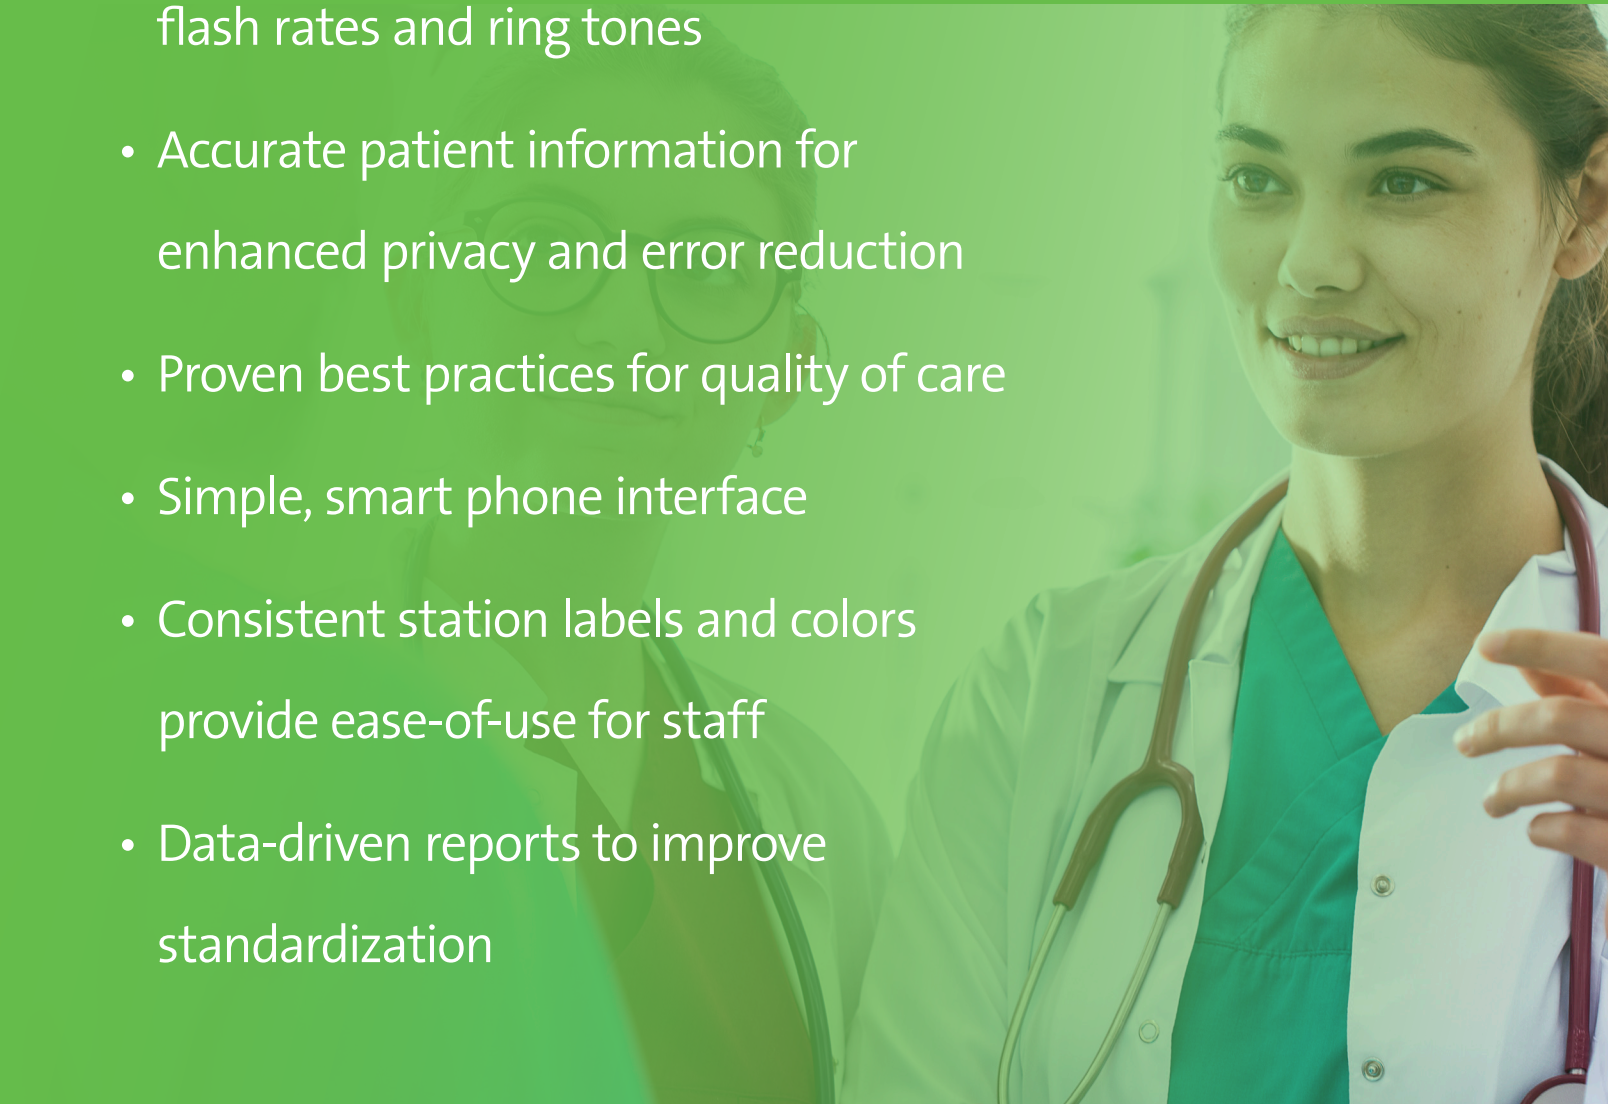

5000

A solution that is simple to install and easy to use to modernize the quality of care across departments for a more consistent, high-quality patient experience with:

- Standardized corridor light colors, flash rates and ring tones
- Accurate patient information for enhanced privacy and error reduction
- Proven best practices for quality of care
- Simple, smart phone interface
- Consistent station labels and colors provide ease-of-use for staff
- Data-driven reports to improve standardization

Responder Solutions are proven around the world.

Welcome to a higher level of quality care

Patients have a choice when it comes to their healthcare providers. Responder 5000 can take your facility to the next level to make it a top destination for those that want the most modern, high-quality care.

The Rauland Responder[®] 5000 Nurse Call Communication System is an easy-to-use, efficient communication solution that will standardize the patient experience across departments and facilities for a more consistent, high-quality experience. Responder 5000 system's comprehensive and automated processes and reporting functions raise staff proficiency.

Rauland

Responder 5000

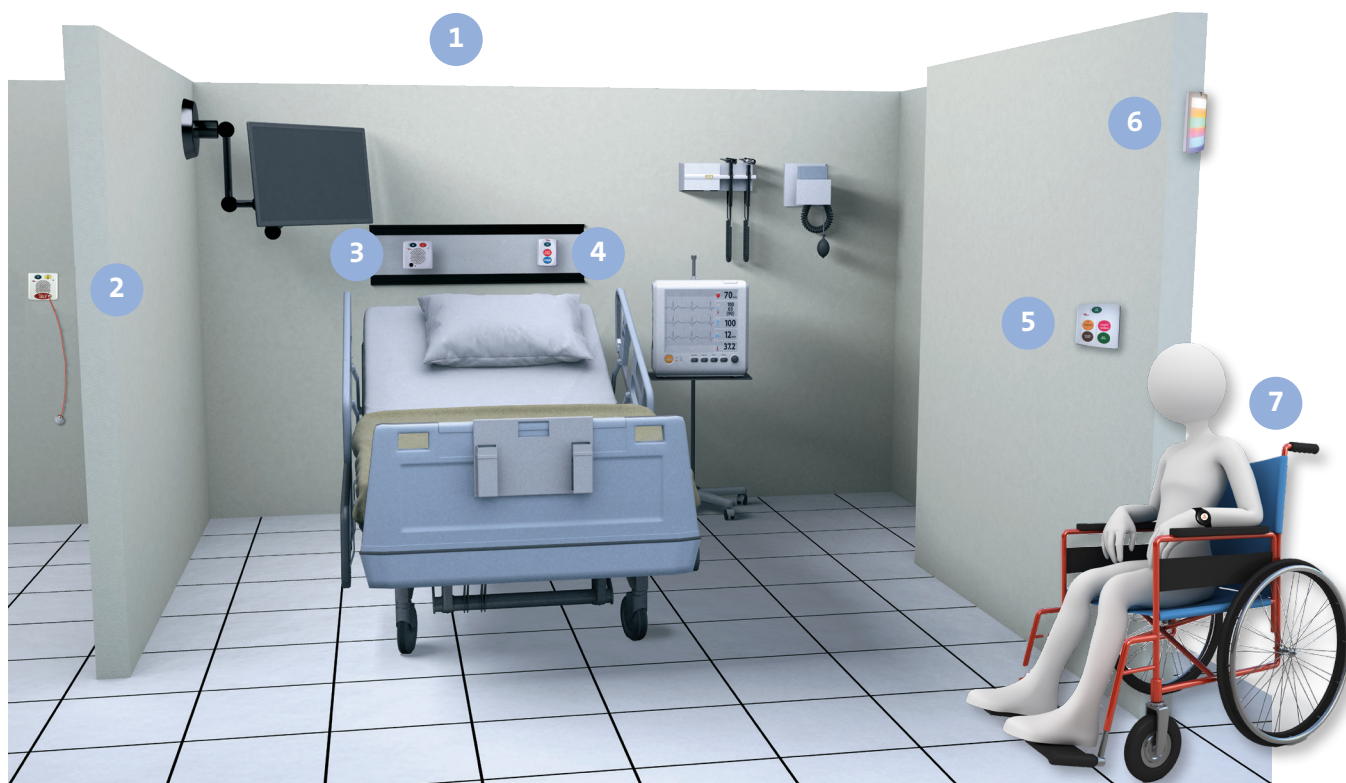

RESPONDER 5000 SOFTWARE IS THE KEY TO DRIVING AN ENVIRONMENT OF CARE THAT MEETS THE TOUGHEST ACCREDITATION STANDARDS INCLUDING SERVICE, MAINTENANCE, RELIABILITY AND CLEANING. FOUR MODULES PROVIDE ACTIONABLE, REAL-TIME INFORMATION:

ACTIVITY BOARD is the centerpiece of Responder 5000, offering a customizable visual overview of all staff activity and patient status on a single display. In real time, staff members can view 11 different data elements including location, and patient and physician information, in one or multiple units in the facility.

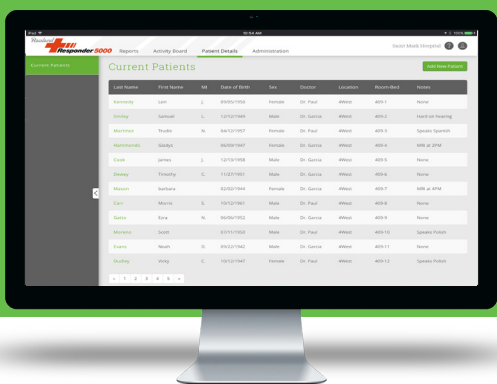

PATIENT DETAILS displays a compact view of all patients within a facility to ensure an educated and professional approach in all patient interactions. Staff always have accurate information for a more consistent, high-quality patient experience. Using approved member access, staff can add or edit patients' personal and location information anytime as needed; information is updated to Activity Boards and Reports.

ADMINISTRATION enables total control, customization and maintenance of the system. This module allows system administrators to manage staff members' information and authentication credentials, access to the system, patient detail information and Activity Boards from different units of the facility.

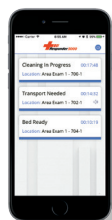

REPORTS measures productivity and call volumes and provides clear, customizable and precise formats to help drive decision making and manage workloads. Use information to identify areas of improvement where better standardization could be used. Data can be summarized to specific units or aggregated for the entire hospital. Reports can be configured to be shared with any staff and automatically emailed so results can be reviewed at any time.

- **Enhance facility appearance:** Standardized corridor colors, flash rates and ring tones at the nurse console demonstrate an organized, professional and modern approach to patients.
- **Improve clinical consistency:** Consistent station labels and colors provide consistency and ease-of-use for staff. With Responder 5000, staff will always have accurate patient information available – ensuring patient privacy and reducing the chance of medical error.
- **Facilitate first-rate care:** Effective, timely care for patients helps eliminate clinical delays and ensures their dynamic needs are met.
- **Take advantage of low cost of entry:** Add value and help increase revenue without expensive servers, licenses or infrastructure.

- **Identify areas of improvement:** Reporting software provides management with the ability to identify areas where additional improvement or standardization is needed, and pinpoint useful data that can be used in staff training

- 1 Smart Phone App**
App is designed for either visual/tone or full voice communication. Smartphones on any SIP-capable device provide instant communication and group notification without middleware. Integrates fire and security alarms into the nurse call system, for instant visibility.

- 2 Bathroom Station**
Audio pullcord in patient's bathroom allows patient to communicate routine requests or distress verbally, directly to caregiver, as well as helping to avoid falls.

- 3 Room Station**
Communicate directly with patients to hear their needs, eliminate unnecessary trips to their room and optimize available time.

- 4 Emergency Station**
Define unique call-in priorities for pushbuttons, which are customizable to the needs of your unit.

- 5 Workflow Station**
Initiate up to four new workflows with the push of a button for more efficient management of your patient's needs and clinical tasks.

- 6 Corridor Light**
Programmable colors and flash rates provide a wide range of indications for alarms, staff registrations and room status.

- 7 Rauland EveryWear™**
Real-time wearable location system allows patients to request help and monitors staff location and equipment to improve care and productivity.

Efficiency, simplicity— worldwide reliability

Responder 5000 delivers the capability to provide a communication environment that fosters staff efficiency while enhancing staff and patient satisfaction throughout your facility. Today, tomorrow and from now on.

KEYBOARDS
AND MICE FOR
HYGIENE-SENSITIVE
AREAS

washable-keyboards.com

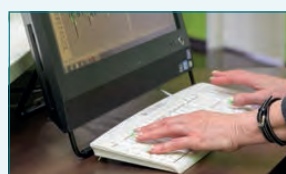

Millions of germs that can cause sicknesses are on the move directly under your fingers. As a result, your keyboard can become a real problem area!

Keyboards and mice are an ideal environment for germs and bacteria. Dirt collects at the most inaccessible points and that makes them difficult to clean. This gives rise to potential hazardous situations for hygiene-sensitive areas like food production or the health sector. But it also affects traditional PC workstations in offices. We therefore recommend that you use specially developed keyboards and mice. We can supply you with an extensive range of washable keyboards and mice to meet any requirements.

The choice ranges from a washable office keyboard to a waterproof professional keyboard for use in critical hygiene areas. In addition to the standard products that are available, we can handle your individual special wishes like printed logos or special keyboard layouts. We also develop and produce completely new data input components and devices for medical engineering applications.

WHY WASHABLE KEYBOARDS?

- To protect patients, personnel and employees from pathogens
- To improve the overall hygiene situation
- To prevent any nosocomial infections
- To guarantee that infections are kept in check in the health sector and the food processing business
- To provide cleanliness and hygiene at traditional PC workstations too
- To reduce patient treatment times and downtimes

SIMPLY PROFESSIONAL DICTATION

Digta SonicMic 3

*The advantages are right there
in your hand.*

turn voice into  action

GRUNDIG
Business Systems

Digta SonicMic 3

For professional dictation and speech recognition

Pushbutton controls

The Digta SonicMic 3 allows you to control recording with minimal movement of your thumb, allowing your concentration to remain fully on the text.

Mouse controls

The optical trackpad allows unerring navigation on the screen. If desired, the mouse can be controlled with the trigger button on the back side of the microphone or with the left and right mouse buttons next to the trackpad.

Customizable function buttons

All function buttons can be freely configured for your personal workflow. They can be programmed for speech recognition functions.

Ergonomics

No matter what position is most comfortable for you, the microphone lies light and easy to grasp in your hand without sticking to your skin.

Optimized for speech recognition

- New microphone technology with optimized frequency response for the highest recognition rate
- Polished button surfaces dampen noise
- Direct interface with DigtaSoft Voice and Dragon Naturally Speaking speech recognition applications
- Honoured by Nuance for best recognition precision

Digta SonicMic 3 Classic

Also available in the Digta SonicMic 3 Classic version. The low-cost alternative without trackpad mouse controls.

Whitehall Manufacturing

Manufacturer of Healthcare and Rehabilitation Products since 1946

Whitehall Manufacturing is a North American manufacturer that serves the healthcare and rehabilitation markets. Our products are made from high-quality, durable materials that work reliably year after year.

Whitehall's products for healthcare include patient care units, scrub sinks, bariatric toilets, dialysis boxes, ligature resistant plumbing fixtures and restroom accessories. Rehabilitation products include hydrotherapy whirlpools, dry heat therapy, moist heat therapy, cold therapy, paraffin tanks and splint pans. These products help healthcare practitioners and therapists provide effective treatment to their patients.

Whitehall Manufacturing has representatives and distributors in every US state and many other countries. Our products can be found in healthcare facilities, and rehabilitation centers all over the world.

MANUFACTURING CAPABILITIES

- Fabrication
- Machining
- Assembly
- Polishing and Plating
- Pattern Shop Injection Molding
- Painting and Powder Coating
- Injection Molding

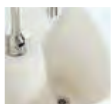

PLUMBING/CODE EXPERTS

- Design to ADA standards
- Design to bariatric requirements
- Design for behavioral healthcare
- Design to individual state requirements
- International expertise, with offices in Canada
- Mexico, the UK and Dubai
- International codes - CSA, UL, FDA approvals
